

Hydrogen Technical Project Manager

We are seeking to appoint a Project Manager to lead on the technical aspects of project development of GreenPower's growing network of hydrogen production, storage and distribution facilities. The first of these, the Argyll Hydrogen Hub, was recently consented and will be operational in 2025.

This role will suit an experienced project manager with experience in delivering complex engineering projects, ideally with experience in green hydrogen or industrial gases. The ideal candidate will have a track record of delivering projects on time and to budget and is degree or higher educated with professional project management qualifications. The role includes:

- Input into project design, from outline concept through to detailed design appropriate to a client organization
- Ensuring high standards of safety are achieved through design, procurement, installation and in handover to operations
- Procurement of electrolysers, balance of plant and advisory services
- Budget, programme and risk management management
- Managing contractors, including both EPC and multi-contracting structures
- Managing stakeholder relationships, including statutory bodies
- Reporting on budget status, milestones, liabilities etc to project teams and to the board
- Supporting the development of the growth strategy of the company
